

Office-Signer

Qualified signatures for MS Word®, OpenOffice, MS Windows® Explorer or Adobe Acrobat® Reader

Qualified signature for:

- Lawsuits, applications, verdicts
- Electronic decisions
- Contracts
- Online forms
- Business correspondence

In all Office formats such as:
PDF, DOC, RTF, XML, etc.

Approved with manufacturer's certification according to §17 art. 4, clause 2 SigG in conjunction with §15 art. 5 SigV. Published officially in the **Amtsblatt der Bundesnetzagentur** No. 8, April 26, 2004, Consec. No. 158. (Germany)

The Office-Signer is the standard software for generating **qualified signatures** in the office, which fulfill the requirements of German and European signature laws.

The integration into MS Word®, MS Excel® or OpenOffice and the integrated electronic signature for PDF documents make signatures useful and understandable for anyone. The signature is **embedded** directly in the PDF file during PDF document processing. The user only needs to manage one file. A simple mouse-click converts the Word document into PDF format and attaches a **qualified signature**.

Signature verification is also initiated by simply clicking the right mouse button. Verification results can be revision-protected with an accredited timestamp, according to the GDPdU. Of course, an external PKCS#7 or S-MIME signature can be attached to documents in any other format, for instance, via Windows Explorer. No expensive Adobe Acrobat® products are necessary. The Office-Signer can be easily installed into existing Office products. No previous special knowledge or training is required.

With the Office-Signer SignGuard Europe AB provides a true all-rounder. In addition to Office applications, other concerns in the area of electronic rights and business dealings can be resolved with only one installation resulting in a smooth workflow without interruption.

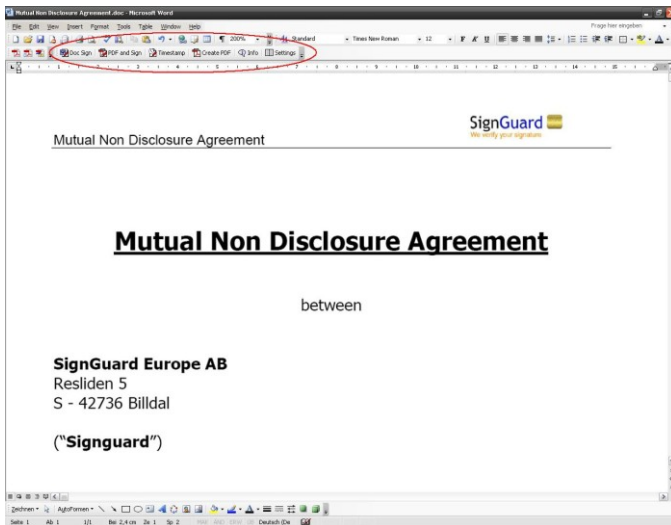

Features

- Accredited timestamps from Trust Centers and DCF-77-compliant timestamps
- Generation of integrated PDF or external PKCS#7/S-MIME signatures
- Multiple signatures in a single document
- **Visible signatures with logo or stamp function**
- Preservation of evidence for important documents and photos
- Copyrighted signing of online documents
- Card support for: SignGuard (SE), Telesec, SignTrust, TC-Trust, D-Trust, S-Trust (DE), QuoVadis (CH), A-Trust (AT) and many more

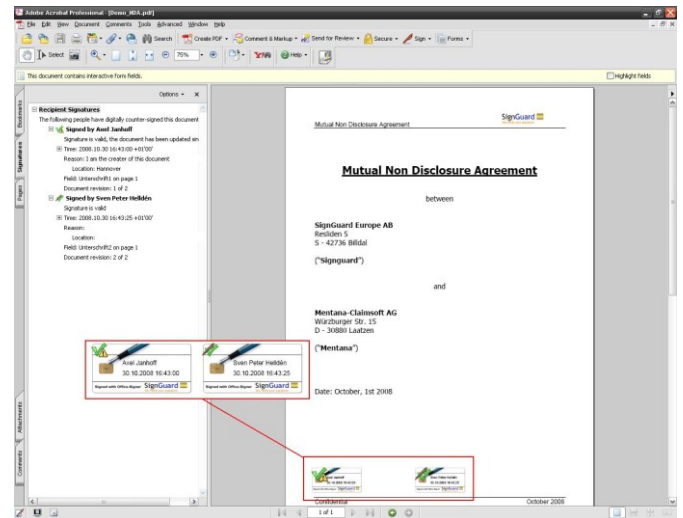

For timestamping of electronic invoices, court cost decisions or for setting up public administration post offices, the Office-Signer provides additional interfaces for using the site www.SignGuard.se.
